Tips for Easier Spring Cleaning

With the beautiful spring-like weather we have had in the last several weeks, all of us are beginning to think spring, and with the thoughts of spring come the thoughts of cleaning. I would like to share with you this week some words of caution and hopefully helpful hints that will make your spring cleaning easier.

The following tips are tried and tested and will assist you in your cleaning activities:

1. Wash windows with a solution of 1/2 cup of ammonia and 1/8 cup of vinegar to one quart of warm water. Your windows will glow with no streaks and this solution is less expensive than prepared spray. **Word of Caution:** Do not clean windows until the trees have budded, the pollen has formed and been washed away by the spring rains. This time of year many of us get over-anxious to clean the windows. The windows need to be the last thing we do with our spring cleaning.

2. Wipe windows dry with newspaper, provided you do not let the newspaper get on the woodwork. It leaves no lint on the glass. Dry on the inside with a sideways motion and on the outside with an up-and-down motion. If any streaks remain, you will know whether they are on the inside or outside if you follow this pattern.

3. Clean Window screens with your vacuum cleaner. This removes dust thoroughly and easily. Remove tarnish from copper screens by wiping with a solution of vinegar in which as much salt as possible has been dissolved. Rinse very thoroughly with water. If you are cleaning copper screens using this method, you need to make sure you do it outside in an area where the salt will not be harmful to the grass or other plant materials.

4. Remove paint from windows by rubbing with a cloth soaked with heated vinegar. Brush stubborn decals with several coats of vinegar. After vinegar has soaked in, the decals will wash off easily. This is an especially helpful hint for persons who are installing new windows or building a new home.

5. Remove hairspray on your bathroom mirror by wiping with a cloth dampened with rubbing alcohol. You'd be surprised how quickly that hairspray will disappear.

6. To polish metal appliances and bathroom fixtures, rub with a soft cloth dipped in rubbing alcohol.

7. Remove stains from white porcelain bathroom fixtures by cleaning them with a solution of dissolved salt and turpentine to restore whiteness. This is an excellent method for cleaning the old porcelain fixtures, such as antique bathtubs, basins, etc.

8. Add 1/2 to 1 cup of vinegar to the rinse water when washing plastic shower curtain, plastic tablecloths or anything of this type. This cuts down the static that attracts dust to the plastic.

9. To remove mildew from shower curtains, drop the curtains into a bathtub of bleach water, enough to cover the curtains. Follow the package directions for the type of bleach that you are using. Let the curtain soak for 1/2 hour and then scrub with a vegetable brush. Rinse the curtains and hang on the shower rod to dry. You'd be surprised how the chlorine bleach will remove the mildew.

10. Water softener in the bath water eliminates bathtub rings and other stains. Regular laundry softener is just as effective as the specially perfumed varieties and is much less expensive.

I hope these tips will help you as you tackle your spring cleaning. Should you have a homemaking question or problem, you may call 352-8244 or you may write P. O. Box 488, Appomattox, VA 24522. It's always a pleasure to hear from you and to help you.

Planning makes shopping trip much more efficient

By OCIE MACK

When you shop, decide how much money you will spend and what you will buy before you go shopping. It's important to get your money's worth for each dollar spent. Smart shopping techniques which will help you do this are:

--**Before you buy, consider:** How you will use the product; how long you will use it; how you will care for it, and how it looks.

--**Remember,** you don't always need the best quality-irregulars or seconds are good for many uses.

--**Read Labels** --Good ones tell you what the item is made of; the size or number, the care it needs, and how to use it.

--**Read the Guarantee**--It should tell you what it covers, how long it will be in force, who is making the guarantee and what you must do to be covered.

--**When you shop a sale,** you should know that nothing is a bargain if you don't need it; If the item is an actual reduction from the regular price; You will usually have a better selection at the sale; Some sale items may be imperfect or damaged; and that items going out of style may be poor buys.

--**Shop with a list**--this helps to reduce impulse buying.

--**Sleep on a major purchase**-- the offer should be just as good the next day.

--**Don't shop** when you have to hurry.

--**Don't shop** when you are tired or hungry.

--**Count your change** - Check sales slips and watch weights and measures.

--**Beware when:**

1. You are told an item is sold out and you are asked to look at something else.
2. The salesperson won't show you the advertised item.
3. The salesperson puts down the advertised item and wants you to buy something else.
4. Only the sample is left and you are told it can be ordered but will take a long time for delivery.

--**Finally,** make your decisions before you start your shopping trip. Buy needed things first; and think about what you have and need and how the item will be used.
